Personal emergency  
care assistant

# eevi Life Pendant

*Care if you need it, peace of mind when you don't*

## Smart and discreet care monitoring when on the move

The eevi Life Pendant can go wherever you go and provides emergency assistance at the push of a button. This new Personal Emergency Response System (PERS) is designed to provide access to emergency support when out and about, using a Telstra SIM to connect you to care.

This personal emergency alarm links to either 24/7 professionally monitored emergency response centre or your personal network of care of up to 5 contacts, including '000'. The monitoring device works wherever there is 4G connectivity and has fall detection enabled. The device offers two-way communication and functions just like a mobile phone for accessible communication and support if ever it's needed.

### Monitoring options:

#### *Professional*

The professionally monitored service connects the user to a 24/7 emergency response centre that guarantees 95% of calls will be answered and responded to within 120 seconds or less at any time of the day. A GPS signal is sent to the emergency response centre at the time the button is pressed for location tracking.

#### *Friends and Family*

When the SOS button is pressed, or the fall detection feature is triggered, contacts of your choice including friends, family and '000' can be contacted in sequence. A GPS message is sent to contacts for location tracking and a missed call is returned directly to the device.

## Who is the life Pendant for?

The eeVi Life Pendant is designed for people who prefer to have access to 24/7 emergency support whilst out of the home. Anyone is suitable for the device, but if you have an existing medical condition or have had a recent fall, travelling to unfamiliar areas, or would like more support, then this personal emergency device could be most appropriate for you.

Eevi products are designed to help you stay safe in your independence, which is why we choose everyday devices that are simple to use. Our goal is to provide you with the best technology solutions to enhance your lifestyle.
